ABSTRACT

The textile industry in India is one of the oldest in the country and is a big one. With hand-woven, hand-spun, and various mills, the textile sector is extremely varied. Since it is one of the biggest sectors, the industry has about 4.5 crore employed workers which also includes 35.22 lakh handloom workers all across the nation.

There are several materials and raw materials that are exported from India to other parts of the world and between April-December 2021, it stood at US\$ 29.8 billion. This market is actually expected to be worth more than US\$ 209 billion by 2029.
